

Remote Patient Vitals Monitoring

Accelerate patient engagement and reduce costs

Better Patient Engagement for Better Outcomes

Patient engagement is a critical factor in the success of any healthcare regimen. **Remote Patient Monitoring (RPM)** is viewed as one of the top solutions for improving patient engagement by 69% of healthcare professionals. RPM gives patients access to care altering technology that collects and transmits real-time data to their provider, resulting in lower costs, increased interaction, and improved patient outcomes.

Revolutionary Engagement Solutions

Even with all the right systems in place, if patients are not consistently taking their readings, an RPM program will not be successful. New innovative RPM technologies from Becklar and Freeus®, a Becklar company, can help.

Personal Connectivity Hub

The new Freeus® Connectivity Hub enables measurements to be captured from medical devices out-of-the-box. No set up or app download required. This automation simplifies life for patients while helping to ensure compliance and alignment with billing/reimbursement requirements for RPM Services. Innovative, open APIs allow data to be easily passed from the Hub to care management platforms ensuring providers have the data they need to provide superior patient care.

The Connectivity Hub also provides the ability to have direct, two-way communication between patient and care provider at the touch of a button. This improves provider efficiency by maximizing time on calls with patients, and making it easier for them to reach patients when measurement thresholds are not met. Automated voice technology powered by AI can be enabled to expedite calls and enhance services.

This device can also provide personal safety services as needed, including fall detection, activity monitoring, geofencing, location services and more. Provide additional peace of mind that urgent calls can be directed to emergency services for immediate attention if needed.

PERSONAL CONNECTIVITY HUB

Freeus® is making it easy by providing multiple capabilities through a single, dedicated mobile Connectivity Hub that uses cellular and Bluetooth technology. This revolutionary, flexible solution provides many benefits in one single, easy-to-use device. You choose which services are most beneficial to your business, and we do the rest!

Engagement Platform

The Personal Connectivity Hub is customized through the Becklar Engagement Platform. Our platform uses highly customizable AI to send proactive voice reminders directly to patients reminding them to take their reading, or advising them if their readings are out of range. Parameters for these notifications are set by care coordinators or physicians and are easily integrated to our platform through our open set of APIs.

This AI-powered virtual assistant streamlines care coordinator activities by directly connecting them with patients when they need to chat, and by answering routine questions automatically without requiring direct involvement of a care coordinator. As a result, the platform helps facilitate rapid scale to larger patient populations without sacrificing quality of care.

Overcoming RPM Hurdles

Challenges such as user errors, troubles with network reliability, or technical proficiency of users can hinder the success of any RPM solution.

Freeus®, a Becklar company, has eliminated patient stress associated with connectivity with a flexible RPM solution that is easy to use and helps improve engagement which is critical for a successful RPM program.

Freeus® and Becklar offer a flexible, plug-and-play solution across key components of the RPM ecosystem to help augment your existing solutions and improve patient engagement and compliance, while simultaneously improving staff productivity and reducing costs.

- Easy-to-use, pre-integrated with medical devices– upload readings out-of-the-box.
- Open APIs – simple integration with care management platforms
- Direct 2-way voice communication between care coordinators and patients
- Pre-configured AI technology improves patient engagement & reduces cost
- Market-leading personal safety & monitoring for added peace of mind
- Superior fall detection, geofencing, activity tracking, and more
