

Reliable, Secure Monitoring

Confidence from any safety solution comes from knowing that reliable monitoring and action plans are just a call, or button push away. A reliable, secure monitoring center requires a combination of the right people and the best technology to deliver security you can count on.

These components help a monitoring center maintain the best possible customer service while ensuring consistent signal processing for the safety and wellbeing of your customer's lives and property. Becklar connected safety solutions for enterprise and personal safety rely on the award-winning monitoring services from AvantGuard™ to respond when an emergency arises, and is supported by their people and superior technology through redundancy in their call centers and automation.

Having highly trained operators with specific traits like empathy and compassion makes all the difference in the world, not only to the monitoring center, but for the comfort and peace of mind of your customers. The right people help those in need feel protected and safe, delivering a sense of calm in an emergency which is critical for a successful outcome. With years of experience, AvantGuard™, a Becklar company, has refined hiring processes to produce [award winning operators](#) who provide the absolute best care and service to your customers.

For a continent-wide subscriber base, hot redundancy is really the only model for a truly reliable monitoring center. AvantGuard™, a Becklar company, operates three central stations across the United States that are fully staffed with multiple generators, networks, phone lines, receivers and systems in place so that if one site's service gets interrupted, the other stations can immediately take the signal load without any interruption to your service.

Redundancy and automation are closely tied together in some aspects. Immediate failover ensures that in the event a central station goes down, from a natural disaster or other unforeseen causes, automations will immediately switch over the signal path to another central station without human interaction.

Our customers trust us to deliver superior service and never-fail monitoring 24/7. Our proven technology and skilled operators deliver on the promise of peace-of-mind to all of our subscribers.

At Becklar, we've got your back.
